SQUORING TECHNOLOGIES PARTNERS WITH TRINITY TECHNOLOGIES FOR RESELLING IN ASIA

Software publisher Squoring Technologies, expert in software and systems projects evaluation and optimization, announced today the signing of a reseller partnership with Trinity Technologies, a leading Asian distributor of Embedded Testing solutions.

Partnership will build on Trinity Technologies position to expand the Squore brand in China, Japan, Korea, Taiwan, Singapore, India, Thailand, Malaysia, Australia, New Zealand, Vietnam, Indonesia, as well as in other countries of the Asia-Pacific region.

Trinity Technologies provides technologies and services to help companies meet their required governance and regulatory compliance needs, improving overall project quality, security and reliability.

“With ever increasing complexity in mission-critical and safety-critical software projects, our clients are looking for solutions that can provide critical project metrics to enable them to make key business decisions fast. We believe that Squoring Technologies brings a significant value add to our clients' overall software project productivity and quality by providing the best enterprise grade business intelligence tool for monitoring software system projects. We look forward to working closely with Squoring Technologies and introducing their solutions to our clients.” said Thomas Chen, CEO for Trinity Technologies.

Patrick Artola, Squoring Technologies CEO, said, « We have confidence in Trinity's strong expertise and reputation to sell and promote our Squore solution in the Asian Region. This reselling agreement will allow Squoring Technologies to speed up its international growth and to achieve its goal of becoming a major player in decision-making tools for software and systems projects monitoring. »

Squore, a decision making dashboard which speeds up software and systems projects achievement

Squore is a decision making dashboard which speeds up software and systems projects achievement, by providing a comprehensive overview of developments quality and efficiency, along with actionable monitoring indicators, remediation plans and trend analysis.

Squore is used worldwide by industrial and service companies as well as software editors to improve the quality and the productivity of their software and systems development projects, for a quick and significant ROI. It is also a powerful reporting and assessment tool to secure contractual relationships between principals and their subcontractors in the context of application development outsourcing.
